

CA-Software (CA-S) / SDLC - ASSIGNMENT-1

SDLC Overview Infographic Outline

→ The SDLC is a structural process to develop high-quality software through distinct phases:

- 1) Requirements: → Understand needs of customer to set clear expectations.
→ Prevents costly misunderstanding.
- 2) Design: → Create system architecture and blueprints.
→ Guides developers and reduces errors.
- 3) Implementation: → Develop the actual software by coding.
→ Turns plans into working product.
- 4) Testing: → Validate functionality and find bugs.
→ Ensures software quality.
- 5) Deployment: → Launch software for users.
→ makes solutions optional.

Interconnection:-

Phases flow sequentially with feedback loops, agile models, revisit iteratively.
