

CA-S (Software) / SDLC - TASK-1

Objective : Create a simple use-case diagram for a library management system

Library management system is a software that helps manage the daily activities in a library, like issuing books and managing members.

These are two main actors:

- Librarian: manages book checkout
- Member: borrows and return book [main cases include:-
 - Check out Book: Done by both Librarian and member.
 - Return Book: Performed by members.
